“Teaching what is in accord with sound doctrine.” Tit.2:1

**CLERGY STATEMENT OF MY REJECTION OF THE COVID-19 VACCINES
BY REV. RONALD JONES D.D.
PUBLISHED ON THE WEBSITE OF THE TITUS INSTITUTE**

As an ordained Christian minister who has taught the Bible for over forty years, both in full-time pastoral ministry and a non-profit Christian ministry on the Internet, it is clear to me that the Covid-19 vaccines violate God’s will revealed in the Bible.

The Bible clearly teaches human beings are made in the image of God (Genesis 1:26) and thus human life is sacred. The Bible also teaches that human life begins at conception (Psalm 139:13-16) and murder is the taking of a human life (Exodus 20:13). Abortion is murder. Any vaccine that uses fetal cell lines to produce and manufacture the vaccine is dependent upon the cells of murdered babies is forbidden by God. This would apply to the Johnson and Johnson vaccine only.

Genesis 1:26 also teaches that God created the human body and its human immune system to function as he created it. The Covid-19 vaccines are not like the traditional vaccines which inserted into the human body a weakened form of the virus and activated the immune system to function as God created it to function. The "new technology" of the Covid-19 vaccines insert genetic code instructions into the cell to direct it to make spike proteins. This interferes with the function of the human immune system. God's intent was for the DNA within a person's body in a cell nucleus to give genetic code instructions not anything outside the cell. Therefore, this process is a violation of God’s will for humanity.

DOCUMENTATION FOR MY POSITION

For the New Technology of the Covid-19 Vaccines:

GAVI, The Vaccine Alliance (gavi.org) produced a video entitled “There are four types of COVID-19 vaccines: here’s how they work.”

(<https://www.youtube.com/watch?v=1FjIVIIcCvc>)

In this video (starts describing Covid-19 vaccines at 2:09), GAVI states, “Not all vaccines [traditional ones] are designed to introduce antigens to the body. Some work by using cells in a patient’s body to produce the antigens themselves. Examples include viral vector vaccines and mRNA vaccines. In both cases, the goal is to get a short fragment of genetic code taken from the target pathogen, in this case the SARS-Cov-2 virus that causes Covid-19, into the patient’s cell. By hijacking the cellular mechanisms, these kinds of vaccines mimic the way viruses normally reproduce during natural infection, but rather than creating copies of the virus, the cells only produce large amounts of antigen that then usually trigger a strong immune response.”

GAVI admits that the cellular mechanisms are hijacked in order to cause the cell to produce antigens. This is an apt description of the interference the genetic code instructions produce in the cell. “Viral Vector vaccines [Johnson and Johnson/Astra-

Zeneca] achieve this by inserting the genetic code for the antigen into a harmless virus which effectively acts like a delivery system to get the code into the cells without causing disease.” “Nucleic Acid Vaccines, like mRNA and DNA vaccines [Pfizer and Moderna] also involve inserting genetic code into cells, to produce antigens. But instead of using viruses to deliver the code, these vaccines take a more direct approach that involve inserting the code directly into cells, either by attaching it to a molecule or by forcing it into cells, using a ‘gene gun.’”

GAVI admits that these vaccines insert genetic code into cells, to produce antigens. God designed the human immune system so that the DNA in the cell would give genetic instructions to the cell rather than genetic code instructions being inserted by human beings from outside the cell. This describes the interference the genetic code instructions produce in the cell.

For the Fetal Cell Lines from Aborted Babies from MDHHS

COVID-19 VACCINES & FETAL CELLS

DO COVID-19 VACCINES CONTAIN FETAL CELLS?

COVID-19 vaccines do not contain fetal cells. However, some COVID-19 vaccines use a historic fetal cell line in production and manufacturing.

- Johnson & Johnson (Janssen) COVID-19 vaccine **used a fetal cell line** to produce and manufacture their vaccine.
- Pfizer and Moderna COVID-19 vaccine **did not** use a fetal cell line to produce and manufacture their vaccine. However, a fetal cell line was used in a very early phase to confirm efficacy prior to production and manufacturing.

COVID-19 Vaccines do not contain fetal cells, even if a fetal cell line is used during any part of development.
